Selecting the Correct Heatshrink Tubing Size

Heatshrink ratio refers to the expansion and recovery rate of the heatshrink tubing. When selecting the correct heatshrink tubing size, it is important to use the 80:20 rule. The 80:20 rule means that a heatshrink tube should shrink by at least 20% and not more than 80% of its complete shrinkage capacity to achieve the desired result.

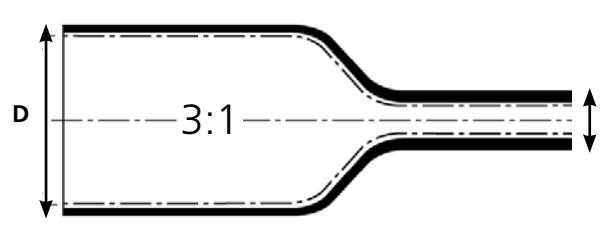

Shrink ratio 2:1

Size		Cable / Wire diameter
1.2/ 0.6		0.7mm
		1.1mm
		1.4mm
3.2/1.6	2.4/1.2	1.9mm

Note: Standard thin wall will shrink to half its supplied size

Example: Heatshrink Ratio 3:1

A 5mm cable diameter is to be wrapped in heatshrink tubing. Either 6/2 or 12/4 tubing is suitable, since the 5mm cable diameter lies within the shrink range of both tube sizes.

Size 6/2

Tube size 6/2 has a range between 2.8mm and 5.2mm which is suitable for a 5mm cable diameter.

Maximum shrink (100%)	Optimum shrinkage max. (80%)	Optimum shrinkage min. (20%)
 <p>Maximum shrinkage = 4.0mm</p>	 <p>Shrinkage = 3.2mm</p>	 <p>Shrinkage = 0.8mm</p>

Size 12/4

Maximum shrink (100%)	Optimum shrinkage max. (80%)	Optimum shrinkage min. (20%)
 <p>Maximum shrinkage = 8.0mm</p>	 <p>Shrinkage = 6.4mm</p>	 <p>Shrinkage = 1.6mm</p>

Note: Tube size 12/4 smallest diameter is 5.6mm which is unsuitable for a 5mm cable diameter.

Busbars

To determine the outside diameter (OØ):

- Add four sides (a + b + c + d) together
- Divide by Pi (3.14)
- Sleeve size should include an allowance to give sufficient clearance to slip easily over the bar. An estimation of +10% is recommended
- Answer relates to outside diameter (OØ) you want to shrink down to

Example: Busbar size

Busbar size = 25 x 3

$$\begin{aligned} O\text{Ø} &= (25 + 25 + 3 + 3) \div 3.14 \\ &= 17.83 \text{ (+10\% for clearance)} \\ &= \mathbf{19.61} \end{aligned}$$

Most suitable diameter 19.0mm

Lay Flat Sizes Chart

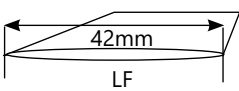

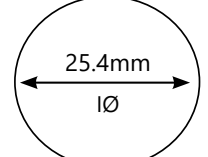

Heatshrink size is given as internal diameter (IØ) and not Lay flat (LF) size.

The lay flat size indicates the approximate internal diameter which will always be smaller than measured mm.

Example:

$$\begin{aligned} I\text{Ø} &= 2LF \div 3.14 \\ &= \mathbf{26.8} \end{aligned}$$
